Abstract [English]

'this paper documents the development of the questionnaire module 'networks and social support' for the panel survey 'labour market and social security' of the institute for employment research. the panel is designed as a comparative study of people receiving unemployment related transfers with the general population. the module that is being developed must help answering three key questions: what effects do social resources have on the ability to cope with having to live from unemployment transfers? how do social resources change during transfer receipt? and finally, what impact do social resources have on ending unemployment? to be able to develop an optimal module that allows answering these questions different methods of collecting data on social networks and social support are reviewed briefly. then three approaches implemented in different general social surveys are discussed. on the basis of these experiences a first version of the module is developed which consists of two parts: a) a part for collecting egocentred network data; b) a part collecting data on selected social resources. to optimize the module on empirical grounds a pretested was carried out (n=98). based on the results of this study the module was revised. the new version was presented to the institute of employment research and it was suggested to integrate it into the third wave of the panel 'labour market and social security'.' (author's abstract)|

Keywords: Ethnic identity, acculturation orientations, domain specificity

Abstract [Deutsch]

'dieser beitrag dokumentiert die entwicklung des fragebogenmodul 'netzwerke und soziale unterstützung' für das panel 'arbeitsmarkt und soziale sicherung' (pass) des iab. pass dient dem vergleich von menschen, die transferleistungen nach sgb-ii erhalten, mit einem bevölkerungsquerschnitt. mit hilfe des zu entwickelnden moduls sollen drei fragen beantwortet werden können: welche effekte haben soziale ressourcen auf die bewältigung der mit dem leistungsbezug in verbindung stehenden situation? wie verändern sich soziale ressourcen im leistungsbezug? und schließlich, welche bedeutung haben soziale ressourcen für
